In this sample, we collect a query string value, [**GET**](/windows-hardware/drivers/ddi/installercore/nf-installercore-iinstallercoreenumgetvalue), from the application, and call a callback function with the query string value. ****NOTE**** Callback functions are discussed in more detail in [Introduction to SQL Server Installer API](../install/introduction-to-sql-server-installer-api.md). The following C++ source code shows the callback function that is called with a query string value. For more information on how to call a callback function, see the linked topic, and [Implementing an SQL Server 2008](/windows-hardware/drivers/install/implementing-an-sql-server-2008-installer-dll-or-apis/example-of-how-to-implement-an-sql-server-2008-installer-dll). ``cpp /* E:main.cpp */
