More particularly, this invention relates to an osteosynthesis plate system that is pre-formed in its final shape and size, then fitted into the position of the bone fracture or osteotomy prior to its being permanently fastened in place. Osteosynthesis plates have been known for many years, in which the plate is adapted to be temporarily fastened to a patient's bone prior to permanent fastening of the plate to the bone. For example, U.S. Pat. No. 4,154,913 to Cuneo, shows a bone fixation system that includes a pair of plates each having a bone-engaging surface adapted to receive a bone pin. The plates are loosely secured to the bone surface by means of bone bolts or screws. Each plate has an opening for receiving a bone pin. By using the plurality of bolts or screws, the plates are attached to the bone and can be maintained in position before final fastening. The plates have surfaces adapted to abut a portion of a patient's skin to allow the patient to be treated. Once the pins are inserted, the plate and skin portions are permanently connected by taping the skin to the plate. U.S. Pat. No. 4,135,909 to Johnson teaches an orthopedic fixation plate and method of use. A fixation plate is shaped to conform to the bone to be fixed. The plate has holes at its ends for the insertion of bone screws, and is placed on the bone before the screws are inserted. The plate is secured to the bone by the screws. The plate and skin portions are permanently connected by taping the skin to the plate. The plate is not pre-formed, but is formed to fit the bone and must be custom-fitted to the bone. This method of fixation, although well-known, is costly and labor-intensive. U.S. Pat. No. 3,853,001 to

As the news cycle continues to be dominated by the Trump administration and social media's unrelenting barrage of un-moderated outrage, this week's episode includes a look at "Cybersecurity Week," a "must-watch" comedy special featuring former Secretary of State Hillary Clinton and Ed Begley, Jr.'s new travel show, and the first—of four—debates between Trump and Clinton since the former presidential candidate accepted his invitation to participate in the Sept. 26 showdown. Trump had earlier announced that he will accept debates from Clinton and third-party candidate Gary Johnson, "who has accomplished next to nothing in his career," in his concession speech following the Indiana primary. The candidates will debate on Friday and Sunday nights during the first presidential debate at Hofstra University in Hempstead, N.Y. It's a pretty straight forward task - given a piece of text, Publish HTML 'Publish as HTML' will generate the entire piece of HTML code that is needed to publish that content. You can choose from a number of different formats including HTML5, Markdown, and even a Wiki-like tool. As such, Publish HTML's functionality is quite varied, but if you need to generate HTML code for a specific project, it can be a very useful tool. So, for example, if you need to generate a new HTML5 for a page you're working on, Publish HTML's Markdown will make it much simpler than if you're just trying to draft out a standard HTML5 document. You're also able to customize Publish HTML's output, allowing you to tailor it to whatever HTML structure and document standard you need. On top of that, Publish HTML also has a great selection of theme options, allowing you to customize the look and feel of your output. You're able to choose from more than 10 themes, which can all be customized with a number of easy to use options. You can choose from a variety of styles, which include light and dark colors, as well as high contrast, but you can also choose whether you want images included in your output.
